WORK EXPERIENCE

Project Engineer, *Boeing EnCore Interiors*

July 2025 - Current

- Ensure airworthiness of commercial airplane interior components (front row monuments, galleys) by managing ~100 concurrent SCNs across 50+ active and legacy programs, driving technical evaluation and disposition of ~50 new changes/month to protect production continuity and in-service fleet support.
- Lead cross-functional integration (design, stress, flammability, manufacturing) for Boeing 737/787 programs, establishing timelines, resolving technical conflicts, and driving engineering change closure in support of delivery stream sustainability and program compliance without direct authority.
- Spearheaded mitigation of a 2-year dormant obsolescence issue, performing material equivalency and form/fit/function analysis, coordinating stress validation and qualification testing to return the affected configuration to airworthy status.

Quality System Engineer, *Hydrafacial*

May. 2024 - July 2025

- Independently managed and optimized the electronic Quality Management System (eQMS), configuring stringent criteria for user access to MasterControl, reducing unnecessary accounts by 80%, thus saving the company \$480k annually.
- Directed the shift from a paper-based workflows (e.g ECO, Adverse Events, CAPA, etc.) to MasterControl's Advanced Quality Event Management (AQEM), streamlining workflows and boosting efficiency by 50% through quicker inter-departmental collaboration.
- Enhanced the Quality Department's data analysis by upgrading Power BI dashboards and writing DAX expressions to create legacy Measures, improving data accuracy and boosting user efficiency by 95% in identifying deliverables.

Quality Engineer, *Alloy Processing*

Aug. 2023 - Feb. 2024

- Revitalized a critical, dormant 5-year project for chemical processing approval for Bombardier Aerospace, completing it within the first quarter of tenure – this achievement secured \$500k/year of work for the company over 3 years.
- Strengthened the Quality Management System (QMS) by meticulously reviewing and revising over 50 Standard Operating Procedures (SOPs) resulting in a 95% reduction in non-conforming findings from external auditors.
- Maintained 100% customer retention by meticulously crafting qualification packages demonstrating compliance with specifications and promptly addressing non-conformance reports (NCRs) in order to foster high-quality standards and strong client relationships.

Software Engineer, *Freelance*

Sept. 2022 - Aug. 2023

- Built responsive websites and RESTful APIs using Node.js and Express.js, achieving a 30% improvement in page load speed and 40% improvement in application performance through optimization techniques such as lazy loading and asynchronous scripting.
- Refactored complex SQL queries in a data-intensive application, reducing query execution times by 50% and enhancing overall data retrieval efficiency.

Quality Administrator, *Valence Surface Technologies*

Contract 2021 - 2022

- Enhanced overall efficiency and turn-around by providing training to a team of operators on advanced anodizing techniques, such as utilizing current rather than voltage for hard coat anodize, to produce parts for reputable aerospace companies such as SpaceX.
- Contributed to significant cost savings for the company by conducting over 100 non-conformance reports, implementing quality control measures in-house and supervising operators on a regular basis to reduce errors.
- Developed and implemented automated Pareto charts that were utilized by all departments resulting in significant time savings and providing consistent company error reports and error percentages.

Water Quality Research Assistant, *Stanford University*

March 2019 - April 2020

- Designed and executed controlled filtration experiments across columns of varying oxidation states and media (bio-charcoal, sand, and manganese oxide sand), systematically analyzing water quality indicators such as turbidity, flow rates, and tracer test results.
- Performed daily sampling, data collection, and analysis of treated water while identifying and resolving operational issues — such as inadequate column flow rates — to maintain experimental integrity and research continuity.
- Conducted extensive literature reviews to inform experimental methodology and contributed findings through structured documentation, supporting the broader research team's objectives with consistent, accurate data reporting.

SKILLS

Languages: JavaScript, TypeScript, Python, GraphQL, SQL, HTML5, CSS3, MATLAB, DAX

Frameworks/Tools: PowerBI, React, Redux, Node.js Express.js, Next.js, Flask, Sequelize, SQLAlchemy, PostgreSQL, AWS (S3, Lambda, Amplify, DynamoDB), Sharp, Docker, Websockets, Mocha, Chai, Playwright, AutoCAD, LabVIEW, Pro II, Microsoft Office, NetSuite

Key Skills: Pair Programming, Test-Driven Development, Object-Oriented Programming, Agile/Scrum Methodologies, Lean Methodologies, Six Sigma, Root Cause Analysis, Supplier Change Notification (SCN), Notification of Change (NOC), CSDT

EDUCATION

App Academy - *Full-Stack Software Engineering*, Sept. 2022

California State University, Long Beach - *B.S Chemical Engineering*, Aug. 2020

CERTIFICATIONS

ISO 13485:2016 with FDA 21 CFR 820 Internal Auditor - *AXEON Corporation*, July 2025

Advanced Quality Event Management System - *MasterControl*, May 2024
